South Jakarta, Indonesia | +62 812-6059-2450 | samuelarmando93@gmail.com | linkedin.com/in/samuelarmando | github.com/sam01149

PROFESSIONAL SUMMARY

Information Systems undergraduate student at Telkom University Jakarta with a GPA of 3.69/4.00. Experienced in developing web applications and backend systems using Laravel, JavaScript, Python, and SQL, as well as building serverless, Redis, and AI-driven applications. Possesses strong data science competencies certified by BNSP and the IBM Data Science Professional Certificate.

TECHNICAL SKILLS

Programming Languages: PHP, JavaScript (Vanilla JS), SQL, Python, HTML/CSS

Frameworks & Libraries: Laravel, Node.js (CommonJS Serverless), Scikit-learn, Pandas, NumPy

Backend & Architecture: RESTful API Design, Serverless Functions (Vercel), Redis, Caching, Rate Limiting

Frontend: Vanilla JS, Progressive Web App (PWA), Service Worker

DevOps & Tools: Git/GitHub, Vercel, VS Code, Jupyter Notebook, Postman

Database: MySQL (via Laravel Eloquent ORM), Redis (key-value / sorted sets)

PROJECTS

Daun Merah — Forex Intelligence PWA

May 2026 - Present

Personal Project · Vanilla JS · Node.js · Redis · Vercel

- Designed and developed a Progressive Web App (PWA) to assist in forex market analysis by integrating macroeconomic data, technical indicators, and market news.
- Built a serverless backend architecture utilizing Redis for caching and distributed locking to manage data retrieved from various external sources, including FRED, CFTC, ForexFactory, Yahoo Finance, ECB, and FinancialJuice.
- Developed an AI-powered market analysis system by integrating multiple Large Language Model (LLM) providers, incorporating fallback and timeout mechanisms to enhance service reliability.
- Implemented key trader-focused features, including an economic calendar, AI-driven market analysis, a trading journal, a position sizing calculator, push notifications, and offline support utilizing PWA technologies.

Smartphone Customer Segmentation Based on Machine Learning

April 2026

BNSP Data Scientist · Python · Pandas · Scikit-learn · Streamlit

- Built a customer segmentation model utilizing the CRISP-DM framework to support data-driven marketing strategies
- Performed data preprocessing, exploratory data analysis (EDA), classification machine learning modeling, and model optimization using GridSearchCV.
- Developed a Streamlit application to automate segment predictions for new customers.

Quality Control System Design — PT Estima Reka Sakti

June 2025

Academic Research · Team of 4 · Information System Analysis & Design

- Conducted field research at a construction company in South Tangerang to map out existing quality control processes and identify bottlenecks.
- Delivered a web-based quality monitoring system design, including use case diagrams, ERDs, and UI wireframes, which was successfully accepted by the client.

National Airline Management Application

December 2024

Academic Project · PHP · Laravel · MySQL

- Built a national airline management web application using Laravel with MVC architecture and Eloquent ORM for relational database operations.
- Developed CRUD modules for flight scheduling, passenger management, and ticket booking using the Blade templating engine.

- Implemented form validation, route protection via middleware, and table relationships adhering to Laravel conventions.

CERTIFICATIONS

Certification Data Scientist, Lembaga Sertifikasi Profesi (LSP) Data

April 2026

Data Science Professional Certificate, IBM via Coursera

March 2026

ORGANIZATIONAL EXPERIENCE

PMK (Christian Student Fellowship) Telkom University Jakarta — Project Manager, Easter Retreat May 2025

- Led a team of 56 members with a budget of IDR 36 million; managed scheduling, inter-division coordination, and risk management throughout the 3-day retreat.
- Ensured the entire agenda ran on schedule through structured communication protocols.

EDUCATION

Telkom University | 2023 – Present

Bachelor of Science in Information Systems · IPK: 3.69 / 4.00
